

Al-Khwarizmi University Admission Test 2026

Masters of Business Administration

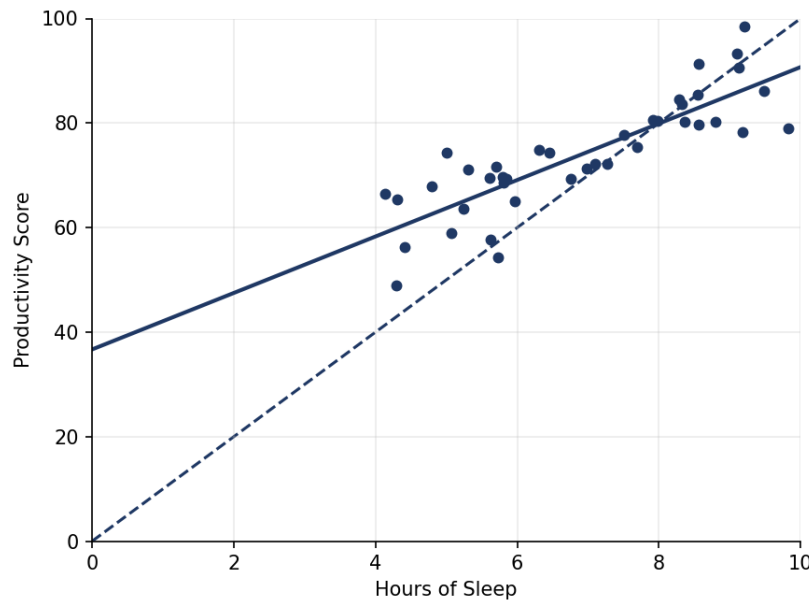

Duration: **1 Hour**

You will need:

- Multiple choice answer sheet
- Soft, clean eraser
- Pencil

SAMPLE

The scatterplot below shows hours of sleep plotted against productivity score for 40 employees. The solid line is the regression line; the dashed line runs from (0, 0) to (10, 100). It relates to the next two questions.

1. Based on the scatterplot of hours of sleep versus productivity score for 40 employees, the relationship shown is:

- A) Positive
- B) Negative
- C) Zero
- D) Undefined
- E) Cannot be determined

2. The slope of the solid regression line is _____ the slope of the dashed reference line.

- A) less than
- B) greater than
- C) equal to
- D) parallel to
- E) perpendicular to

3. A grocery chain plans to replace physical loyalty cards with a mobile app to reduce printing costs. Analysts predict this will reduce enrollment in the loyalty program. Which of the following, if true, would most weaken the analysts' prediction?

- A) A similar chain that switched to an app-only loyalty program saw enrollment increase within a year
- B) Mobile apps require regular software updates
- C) Some members say they prefer a physical card
- D) The chain plans to discontinue mail-in rebates
- E) App development requires additional IT staff

The table below shows the number of gyms and health statistics for six towns of similar population size. It relates to the next two questions.

Town	Gyms	% Adults Exercising 3+ Times/Week	Overall % with Healthy Blood Pressure
Ashford	4	48	90
Brookline	2	32	82
Cedarville	6	60	94
Dunmore	3	40	87
Eastgate	5	55	92
Fenwick	1	25	78

4. Based on the table, which town has both the highest number of gyms and the highest overall percentage of adults with healthy blood pressure?

- A) Ashford
- B) Brookline
- C) Cedarville
- D) Dunmore
- E) Eastgate

5. Which of the following CANNOT be inferred from the table above?

- A) The town with the most gyms also has the highest percentage of adults exercising regularly
- B) The town with the fewest gyms has the lowest overall percentage of adults with healthy blood pressure
- C) Building more gyms in a town guarantees improved cardiovascular health outcomes
- D) Factors besides gym count, such as diet or healthcare access, may influence a town's cardiovascular health
- E) All of the above can be validly inferred

6. Unlike his predecessor, _____, the new principal emphasizes student wellbeing over standardized test scores.

- A) who prioritize standardized test scores
- B) whom prioritizes standardized test scores
- C) who prioritizes standardized test scores
- D) which prioritize standardized test scores
- E) which prioritizes standardized test scores

The following passage relates to the next three questions:

A pilot program studied by the Future of Work Institute found that companies adopting a four-day workweek without reducing pay saw a 15% decrease in employee burnout and only a 3% dip in overall output. Supporters argue that compressed schedules force organizations to eliminate low-value meetings and redundant processes, ultimately improving efficiency. Critics counter that the productivity gains observed in pilot programs may not hold at scale, since early adopters tend to be smaller, more agile companies with simpler operations. They also point out that client-facing roles, such as customer support, often cannot compress their hours without service gaps. Supporters respond that staggered scheduling across teams can maintain coverage while still granting individual employees a shortened week.

7. What is the primary purpose of the passage?

- A) To prove that all companies should adopt a four-day workweek
- B) To present findings favoring the four-day workweek alongside concerns about scaling it
- C) To argue that client-facing roles cannot benefit from schedule changes
- D) To criticize companies that require five-day workweeks
- E) To explain how pilot programs are designed

8. The critics mentioned in the passage are primarily concerned that:

- A) Employees will demand higher pay
- B) The productivity gains seen in pilots may not scale to larger, more complex organizations
- C) Burnout will increase under a four-day schedule
- D) Compressed schedules eliminate necessary meetings
- E) Client satisfaction always improves with fewer work hours

9. Which of the following can be inferred from the passage?

- A) Every company that tries a four-day workweek will see reduced burnout
- B) Staggered scheduling is one proposed way to address coverage concerns in client-facing roles
- C) Output always increases under a four-day workweek
- D) Larger companies have already proven the model works at scale
- E) Critics believe the four-day workweek has no benefits at all

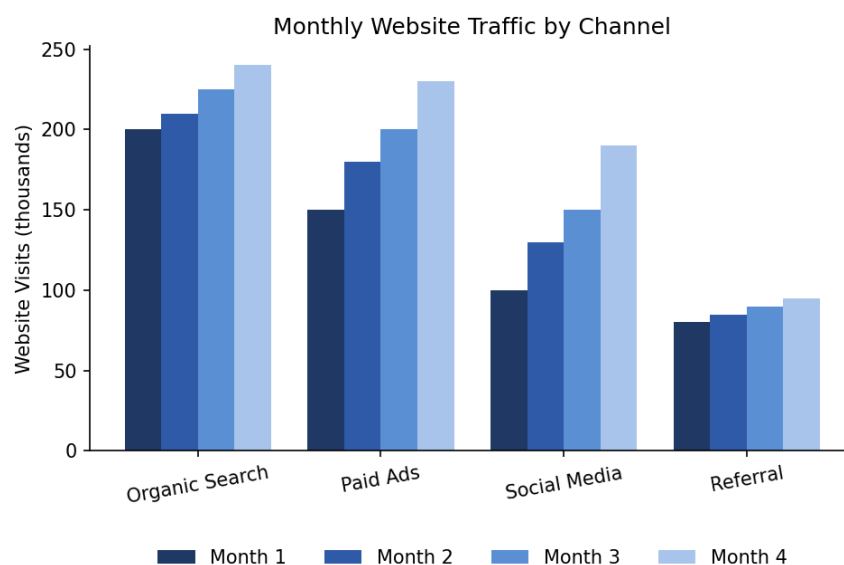

10. A mixture contains vinegar and oil in the ratio 2:5. If 6 liters of vinegar are added, the new ratio becomes 4:5. How many liters of oil are in the original mixture?

- A) 10
- B) 12
- C) 15
- D) 18
- E) 20

11. A hospital extends visiting hours to improve patient satisfaction scores, expecting staff workload to remain manageable. Which assumption underlies this decision?

- A) Extended visiting hours will not significantly increase demands on nursing staff
- B) Patient satisfaction scores affect hospital funding
- C) Other hospitals have also extended visiting hours
- D) Visitors will bring gifts for patients
- E) Current staff support the change

The chart below shows monthly website traffic, in thousands of visits, by acquisition channel. It relates to the next two questions.

12. Based on the chart of monthly website traffic, which channel had the highest total traffic across all four months combined?

- A) Organic Search
- B) Paid Ads
- C) Social Media
- D) Referral
- E) Cannot be determined

13. What was the approximate percentage increase in Paid Ads traffic from Month 1 to Month 4?

- A) 35%
- B) 45%
- C) 53%
- D) 60%
- E) 70%

14. Two trains leave the same station at the same time, traveling in opposite directions. One travels at 55 km/h and the other at 65 km/h. After how many hours will they be 360 km apart?

- A) 2.5 hours
- B) 3 hours
- C) 3.5 hours
- D) 4 hours
- E) 4.5 hours

15. A beverage company claims that switching to aluminum bottles will improve its brand's environmental image. Which of the following, if true, most strengthens this claim?

- A) Aluminum bottles are lighter to ship than glass
- B) A recent survey shows that 72% of consumers under 35 consider packaging recyclability when choosing beverages
- C) Competitors have not switched to aluminum
- D) Aluminum bottles cost more to produce initially
- E) Older consumers report less concern about packaging

16. A phone originally priced at \$600 is discounted by 20%. If a further 5% discount is then applied to the sale price, what is the final price?

- A) \$432
- B) \$444
- C) \$456
- D) \$468
- E) \$480

17. _____, the product launch was delayed by two months.

- A) Because a critical safety defect was discovered during testing
- B) A critical safety defect discovered during testing
- C) With a critical safety defect during testing
- D) Having discovered a critical safety defect, the product launch
- E) Discovering a critical safety defect during testing

18. What is the area of a triangle?

- (1) The base of the triangle is 10 units.
- (2) The height of the triangle is 6 units.
- A) Statement (1) alone is sufficient, but statement (2) alone is not sufficient.
- B) Statement (2) alone is sufficient, but statement (1) alone is not sufficient.
- C) Both statements together are sufficient, but neither alone is sufficient.
- D) Each statement alone is sufficient.
- E) Statements (1) and (2) together are not sufficient.

19. What is the value of z?

- (1) $2^z = 32$
- (2) z is a positive integer.
- A) Statement (1) alone is sufficient, but statement (2) alone is not sufficient.
- B) Statement (2) alone is sufficient, but statement (1) alone is not sufficient.
- C) Both statements together are sufficient, but neither alone is sufficient.
- D) Each statement alone is sufficient.
- E) Statements (1) and (2) together are not sufficient.

20. A company sells a gadget for \$25 per unit. Fixed costs are \$200,000, and the variable cost is \$15 per unit. What sales quantity is needed to break even?

- A) 15,000
- B) 18,000
- C) 20,000
- D) 22,000
- E) 25,000
